Regarding claims 1, and 21, Horiuchui discloses an automatic shifting control device for a bicycle with features of the claimed invention that facilitates the operation of a bicycle that is subjected to force or stress from a stress inducing member consists of means to operate the bicycle transmission by a preset of gear control. The device has various sensing units operating in a predetermined time that control the operation of the components (see claim 1).

Regarding claims 2-3, the operation is on a bicycle transmission shift device.

Regarding claims 4, 8, the gear arrangements and the various computer controlled steps provide general motion assistance.

Regarding claims 5, 9, the device senses various speed conditions (see, for example, claim 3).

Regarding claims 6-7, the sensing unit is a torque sensor (see claim 20).

Regarding claim 10, the various speed and the crank torque is indicative of its speed.

Regarding claims 11-14, the component is the bicycle-shifting device and its related automatic conditioning.
